

# Discharge measurement – Reinhard industrial laundry center

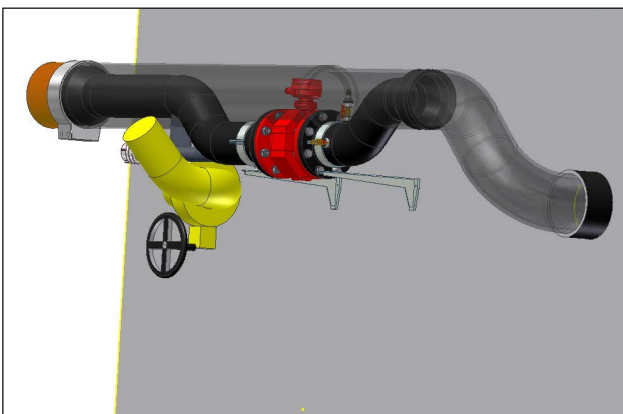

To make all events and measuring data traceable for later analysis, measuring instruments record all water flows and other parameters for a period of five years.

## Requirement

- High measuring accuracy
- Little maintenance
- Flow metering for cost monitoring
- Temperature measurement and pH measurement with recording of data

Stationary flow meter 150 nominal diameter installed in the sewer discharge line

3-D planning

## Data recording

Data loggers record flow, temperature and pH
