When is the hydraulic dump suitable?

The dump, which is installed outside the medium (rain water, waste water, etc.), removes deposits foreign to the environment and is extremely effective by powerful flushing.

Benefits

- Ideal torque and stress profile, thus minimal stress, optimal utilization of the construction and hardly mechanical noise
- Fine graded series from 200 l / m up to 2000 l / m
- Floodable bearings made entirely of stainless steel
- Construction lengths up to 10 m

Application

- Storm water tank
- Cleaning system for sewer storage spaces

Practical applications

We will find out which application is the right for you in a conversation or on a visit. Do not hesitate to call us.
