Mains-independent with only 1m² panel area*

Permanent connection to the control system

World innovation LDMdrive

Autarkic drain regulator with partly filled flow measurement

The LDMdrive is the first discharge controller with precise flow measurement that can control rain water tanks autonomously thanks to its low energy requirements and is still fully and permanently monitored by the control system.

- *Up to nominal size DN250 with 1m², larger up to DN500 with 2m² panel area completely self-sufficient
- One week of self-sufficient operation with storage battery (LxWxH 33x69x22cm); also suitable for mains and UPS operation
- Thanks to the LDM flow measurement, the flow is measured even in dry weather and at the lowest fill levels
- The gate valve control is integrated in the transmitter
- Full control at the control system thanks to permanent connection via 4G mobile network
- Complete data recording integrated in the transmitter and accessible via web interface
- Reports contamination before measurement errors occur

Learn more at IFAT in Munich

Date / Time	Monday, 13 May - Friday, 17 May 2024
Location / Stand	Munich Exhibition Centre Hall C1 Stand 341
